

## Rainbow Trout (steelhead) Research Project

The Ganaraska Region Conservation Authority (GRCA) is conducting a Rainbow Trout (steelhead) spawning population dynamics study. This is a multi-year study to examine population size and life history diversity within a spawning population. As part of this study, GRCA staff are tagging adult Rainbow Trout. If you capture a tagged Rainbow Trout, please report the tag number and colour to the Ganaraska Region Conservation Authority's Fisheries Biologist **Brian Morrison 905 885 8173 ext 229** or [bmorrison@grca.on.ca](mailto:bmorrison@grca.on.ca)

All tags are attached just in front of the dorsal fin along the back of the fish, and say ONT MNR and a 5-digit number.
